These dreams-filled tiny bright eyes;
These treading feet, tottering surprise

Embrace them, as they walk their way
making it ahead, with first step away
don't let them stop, don't let them stray
Guide them with hope, make a pray

Unfurl their wings in the bright sky
One day, they will choose to fly
Glory would await, with open arms
taming fate, within their palms

Someday, when hair would grey
cracks in your skin would make deep way
they will hold your hand, like you did once
walk you home, to the setting sun
their touch would tell you
their smile would say...

Thank you, to be with me, Always...

Primary Investment Objective: To generate income by investing in debt & money market instruments along with long-term capital appreciation through investments in equity & equity related instruments. However, there is no assurance or guarantee that the investment objective of the Scheme will be achieved. The Scheme does not assure or guarantee any returns.

Investment Strategy: The scheme intends to generate income by investing in debt & money market instruments along with long-term capital appreciation through investments in equity & equity related instruments. However, there is no assurance or guarantee that the investment objective of the Scheme will be achieved. The Scheme does not assure or guarantee any returns.

Fixed Income Strategy: The Scheme proposes to invest in a diversified portfolio of high quality debt and money market instruments to generate regular income. The fund manager will allocate the assets of the scheme taking into consideration the prevailing interest rate scenario & the liquidity of the different instruments.

Equity related Strategy: The equity allocation will be managed actively. The focus would be to build a diversified portfolio of strong growth companies, reflecting our most attractive investment ideas, at all points of time.

The portfolios will be built utilising a bottom-up stock selection process, focusing on appreciation potential of individual stocks from a fundamental perspective. The AMC employs a "Fair value" based research process to analyse the appreciation potential of each stock in its universe (Fair value is a measure of the intrinsic worth of a company). the universe of stocks is carefully selected to include companies having a robust business models and enjoying sustainable competitive advantages as compared to their competitors. The Fund will have the flexibility to invest across the market capitalisation spectrum.

Cash-Futures Arbitrage: The fund would look for market opportunities between the spot and the futures market. The cash-futures arbitrage strategy can be employed when the price of the futures exceeds the price of the underlying stock. The fund would first buy the stocks in cash market and then sell in the futures market to lock the spread known as arbitrage return.

Buying the stock in cash market and selling the futures results into a hedge where the fund have locked in a spread and is not affected by the price movement of cash market and futures market. The arbitrage position can be continued till expiry of the future contracts. The future contracts are settled based on the last half an hour's weighted average trade of the cash market. Thus there is a convergence between the cash market and the futures market on expiry. This convergence helps the fund to generate the arbitrage return locked in earlier. However, the position could even be closed earlier in case the price differential is realized before expiry or better opportunities are available in other stocks. The strategy is attractive if this price differential (post all costs) is higher than the investor's cost-of capital.

The fund may also enter into reverse arbitrage strategies, i.e., if futures were quoting at a discount, futures would be bought and shares would be sold to lock in an arbitrage profit.

Differentiation: An open ended fund, for investment for children, having a lock-in of 5 years or till the child attains age of majority (whichever is earlier)

	<p>Axis Retirement Savings Fund - Dynamic Plan</p> <p>The Investment Plan has a dual objective of generating capital appreciation by investing in equity and equity related securities as well as generating income by investing in debt and money market securities, while attempting to manage risk from the market through active asset allocation. In order to achieve this process, the scheme will follow a top-down and bottom-up strategy. The top-down process will lead to the active ongoing asset allocation decision between equity and debt and the bottom up process would lead to construction of the portfolio using specific securities.</p> <p>The AMC has built a proprietary in-house quantitative model to determine the top-down dynamic asset allocation for the fund. The AMC has built a proprietary in-house quantitative approach to guide the asset allocation decision. The quantitative approach looks at equity markets across three parameters – momentum, volatility and valuations – to decide the appropriate allocation to the same. The allocation to debt is the residual number that is arrived at after deciding the equity allocation. The asset allocation decision is reviewed on an ongoing basis and is dynamically linked to movements in market variables.</p> <p>Axis Retirement Savings Fund - Conservative Plan</p> <p>The Investment Plan seeks to generate regular income through investments in debt and money market instruments, along with capital appreciation through equity and equity related instruments. The fund manager will keep in mind the yield structure of different asset classes (e.g. the sovereign yield curve and the corporate bond yield curve) as well as the kinks within a particular yield curve (e.g. the different points of the sovereign yield curve) while making investment decisions.</p> <p>Equity related Strategy:</p> <p>The equity allocation will be managed actively. The Fund will have the flexibility to invest across the market capitalisation spectrum.</p> <p>The Fund by utilising a holistic risk management strategy will endeavor to manage risks associated with investing in equity markets. The Fund has identified the following risks and designed risk management strategies, which are embedded in the investment process to manage these risks</p> <ol style="list-style-type: none"> Quality Risk - Risk of investing in unsustainable / weak companies. Price Risk - Risk of overpaying for a company Liquidity Risk - High Impact cost of entry and exit Volatility Risk - Volatility in price due to company or portfolio specific factors Event Risk - Price risk due to a company / sector specific or market event <p>Cash-Futures Arbitrage:</p> <p>The fund would look for market opportunities between the spot and the futures market. The cash-futures arbitrage strategy can be employed when the price of the futures exceeds the price of the underlying stock. Such investments shall be subject to the investment objective and strategy of the Scheme and the internal limits if any, as laid down from time to time. These include but are not limited to futures (both stock and index) and options (stock and index).</p> <p>Derivatives are financial contracts of pre-determined fixed duration, like stock futures/options and index futures and options, whose values are derived from the value of an underlying primary financial instrument such as: interest rates, exchange rates, commodities, and equities.</p> <p>Derivatives can be either exchange traded or can be over the counter (OTC). Exchange traded derivatives are listed and traded on stock exchanges whereas OTC derivative transactions are generally structured between two counterparties.</p>
Risk profile of the scheme	<p>Mutual Fund Units involve investment risks including the possible loss of principal.</p> <p>The scheme carries risks associated with investing in equities, fixed income instruments, debt instruments having credit enhancements and derivatives securities.</p> <p>Investment in mutual fund units involves investment risks such as trading volumes, settlement risk, liquidity risk and default risk. Also, the value of the Scheme investments may be affected by currency exchange rates, changes in law/ policies of the government, taxation laws and political, economic or other developments.</p> <p>Investments in debt and money market instruments are subject to interest rate risk, re-investment risk, basis risk, credit risk, spread risk, prepayment risk, creation of segregated portfolio, etc. Equity and equity related instruments are volatile by nature.</p> <p>Listing of the units of the fund does not necessarily guarantee their liquidity and there can be no assurance that an active secondary market for the units will develop or be maintained. Consequently, the Fund may quote below its face value / NAV.</p> <p>The Scheme may invest in derivative products in accordance with and to the extent permitted under the Regulations and by RBI. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Trading in derivatives carries a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount. Thus, derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have an impact on their value and consequently, on the NAV of the Units of the Scheme.</p> <p>Investments in 'REIT' & 'InvIT' have risks associated with price-risk, credit risk, liquidity and marketability, re-investment risk and risk of lower than expected distributions.</p> <p>Please refer to the SID for further details.</p>

Creation of segregated Portfolio	In case of credit event, the Scheme may create segregated portfolio of debt and money market instruments in terms of applicable SEBI regulations/ circulars.																																						
Risk management	<p>Risk management is going to be an integral part of the investment process. Effective risk management is critical to fund management for achieving financial soundness. The Scheme also relies on its own research as well as third party research. This involves one-to-one meetings with the managements, attending conferences and analyst meets and also tele-conferences. The analysis will focus, amongst others, on the predictability and strength of cash flows, value of assets, capital structure, business prospects, policy environment, strength of management, responsiveness to business conditions, etc.</p>
